provides Notes mail and calendaring for Windows Mobile 5 & 6 and the iPhone

Applicable can help you reduce costs and achieve efficiencies with the latest version of Domino – release 8.5

Domino 8 and 8.5 are a major overhaul of the way the Lotus email platform looks and works, providing a new interface for end-users, significant new collaborative functionality and building on the legendary security and stability of the Domino server.

IBM Lotus Notes needs industry-leading experience to get the most from it...

To use all of the features in this new release, you need an experienced business partner you can trust. Contact us today to start benefiting from our experience with the IBM Lotus product family.

Applicable have the experience, skills and tools to ensure your Domino environment is always at peak performance and supports your business 24/7.

"Applicable offered expertise in all the core areas, the operating environments and data migration, and also, importantly, in project management."

Chris Foster

IT Network & Security Manager UYT

How to buy Domino from Applicable

Applicable's licensing specialist has wide experience of IBM's product portfolio. This knowledge enables us to save money for our customers, by reviewing their existing license details and comparing them to more efficient licensing models.

We can provide basic Notes and Domino licenses, but in many situations the Complete Enterprise Option (CEO) licensing model offers a better-value alternative. It changes to a user-based licensing system. Commonly used products are bundled up into easy to understand groups.

Each CEO Bundle has a different set of license entitlements, aimed to suit different situations. The bundles cover the complete range of Lotus brand software, DB2 and many of other IBM products you may already be using.

Server improvements

Domino 8 and 8.5 offer significant new features to reduce storage and performance issues:

Domino Attached Object Store – 40%- 60% reduction in disk space usage by storing attachments as a single copy.

ID Vault – Simplified storage, management and recovery of Notes ID's and passwords.

Improved system response times – Once again IBM Lotus have improved Domino server performance. When you upgrade to Domino 8 on your existing hardware the server runs faster and more efficiently.

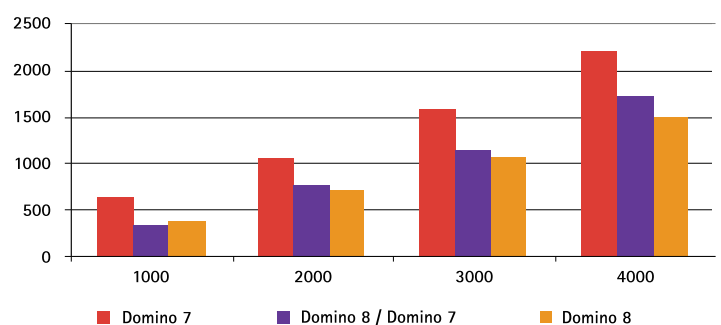

xPages – A new way of developing powerful and beautiful Web 2.0 applications.

Domino Configuration Tuner – Gain more control of your Domino servers by using this new tool to detect and fix problems early before they affect your users.

Design Compression – Domino mail templates shrink from 28mb to 9mb.

Native 64bit support – Larger memory address space and improved I/O.

Total Disk I/O operations per second

Why not extend your

Sametime

Add in presence-awareness and instant messaging capabilities to enable real-time communications across your organisation.

Client improvements

Notes Sidebar – Provides instant access to extended functionality inside your Notes client without having to switch application. – giving access to chat, document sharing and RSS feeds as well as your own custom widgets.

Notes Shared Login – no need to remember multiple passwords, allows greater ease of use for users and fewer helpdesk calls.

Improved Mobility – Use the power of Lotus Notes mail and calendaring on your Windows Mobile phone or iPhone.

Customised Workspace – New Eclipse client enables creating of composite applications to get more value from line-of-business applications.

In-line spell-checking – save time and improve productivity.

iNotes 8.5 – Improved browser mail and calendaring, includes options for Quickr integration, presence awareness and low-bandwidth connectivity.

Productivity Tools – replace Microsoft Office on the desktop – free!

Improved Out of Office – More flexible notification with the ability to define groups of users and specify exceptions.

Professional services

Healthcheck and audit – Our review gets your server estate fit for migration to ND8. With a complete professional review of your server estate you can move forward into the future with confidence, knowing your platform is configured for optimum performance.

Proof of concept implementations – Use our labs to discover and resolve issues prior to going live across your enterprise.

Composite application and development support – get the most out of the new Eclipse framework, creating new business information from existing Notes applications. Our skilled consultants can also safely integrate data into Notes applications from SQL Server, ERP, MRP and SAP applications.

Roll-out – If you're dealing with a large number of demanding users rolling out an upgrade can be a stressful time. Applicable support tens of thousands of users across many estates, so we have deep upgrade and migration experience. Our consultants also have well-established best practices to ensure the work is completed smoothly and often without a break in service.

Mobile extension implementation – Whether you want to go mobile with BlackBerry devices, or Windows Mobile, using Notes Traveler, we have the experience to get you live and mobile without a hitch.

collaboration environment to improve productivity within your organisation?

Connections

IBM Lotus have translated the hottest social software utilities into a suite of applications that are fit for business. The components in Connections make it easier to access the expertise already embedded within your organisation.

Quickr

Quickr provides you with team places where your teams can collaborate effectively, now with extra Web 2.0 functionality like team blogs and wiki-type documentation management. Share content and work faster online with your teams – inside or outside your firewall.

Delivering technology solutions with

Having delivered services to BT Global Services for many years enables Applicable to display the 'Delivering Technology Solutions With BT' logo. This highlights a commitment to working with BT Global Services to deliver a wide variety of services, ranging from hosted IBM collaboration solutions and professional services, Microsoft Exchange and collaboration solutions and IBM WebSphere hosting and support.

Registered Partner

Many Applicable customers host implementations in data centre facilities; whether that is the customer's own data centres, IBM or BT data centres, or Applicable's facility in Global Switch in London. Complex implementations in remote locations demand the highest level of communications support. Applicable's team of highly trained and qualified Cisco engineers complete implementations and provide 24x7 support cover for our networks. Applicable has Registered Partner accreditation from Cisco, with Security VPN/Firewall Express Specialization.

As a BlackBerry Alliance Partner, we deliver high-value, hosted solutions at keen prices to ensure the best support for our BlackBerry users whether the server is hosted with us or on their own site.

Applicable for Domino and Exchange Professional Services - WebSphere Portal Services - Email Archiving - 24x7 Monitoring and Technical Support - O/S Support - Blackberry Hosting - CISCO Consultancy.
