

IBM Lotus Quickr

hosted by

 **applicable**

How could an online team-space improve the way your organisation works?

While email is the bedrock of many collaboration solutions we recognise that it doesn't go nearly far enough when you're working as a group on a project. These limitations are amplified when your group has members from outside your organisation, or is geographically dispersed.

IBM Lotus Quickr allows you to collaborate more effectively by sharing files, information and resources online in a secure and well-managed manner.

# IBM Lotus Quickr provides a secure environment where you can work in groups

Applicable have wide experience in the messaging and collaboration market. We have been running Quickr servers for our customers since QuickPlace version 1.0 and also supporting it in a hosted environment.

It may seem easy to find people who can provide hosted Quickr. It's a lot tougher to find services that are resilient and provide a service that is fit for business, 24x7. Applicable manage a wide portfolio of solutions 24x7, so your service level requirements will fit seamlessly into our delivery capability.

## Quickr Connectors

Using Lotus Quickr connectors for popular business applications, you can access content and collaborate from where you are without switching applications.

With a simple click, you can save Microsoft Office documents to your places, or move a Lotus Notes attachment to a Lotus Quickr library and send a link instead of large email files. Your recipient is assured of the most recent version instead of the stale version attached to an old email.

## Business Application Templates

Quickr's Business Application Templates are a great way to build team places right out of the box.

Pre-built templates provide immediate value and support for common business processes.

## How to buy Quickr from Applicable

**Get a trial place.** Try the rich functionality of Quickr free for 30 days. Our demonstration places provide facilities for up to 20 users. Get working within 24 hours of your initial request.

**Get a shared place.** We provide shared facilities that offer total security, an industry leading SLA and almost all of the functionality of your own server, just without the costs associated with setting up your own equipment. These servers are competitively priced per users and are ideal for short projects, or ad hoc collaboration with your suppliers and partners.

**Get your own place.** Team places can become an integral part of how your business works. Applicable can provide industry-leading hosting facilities for a dedicated server for your team places, or we can support an implementation in the datacenter of your choice. Dedicated solutions are priced per server, not per user. As an experienced enterprise hosting partner we can understand your hosting requirements quickly and provide exactly the solution to suit your organisation – discuss your needs with us today.

## Content libraries

Content libraries help you easily organise and share content for your projects, your teams or yourself.

You can quickly set up libraries for all your documents and rich media files so your teams can easily share and collaborate with a range of tools to help manage content.

## Team Places

Creating a Quickr 'place' is easy for anyone to do and doesn't require intervention from your busy IT department.

Just follow the DIY guide from your Lotus Quickr home page to help you set up places. When you set up a Lotus Quickr place, you can customize it with out-of-the-box components, such as team calendars, discussion forums, blogs, wikis and other collaboration tools for managing projects.
