

Wide-area Data Services management

with

Applicable management of Riverbed ensures acceleration of your applications

Infrastructure consolidation services

Our experienced consultants can review your applications infrastructure, to take advantage of LAN-like performance from your WAN. Centralise your infrastructure and save costs.

Virtual throughput services

Rather than provisioning extra bandwidth Applicable can optimise your existing connections, yielding more bandwidth, where needed.

Enhanced application optimisation services

The power of experience enables data throughput increases for key applications, including Windows file sharing, Microsoft Exchange, Lotus Notes, and ERP systems.

Accelerated, secure remote access

Working with your VPN solution WDS gives mobile users LAN-like performance, enabling them to work as if they were in the office.

Disaster recovery services

WDS reduces back up time dramatically. With more confidence in your back up infrastructure you can review your recovery procedures, with restores available taking similar time to the back ups.

The Riverbed Steelhead product family accelerates the performance of applications and network operations, wherever users are.

Applicable ensure effective implementation and day to day running of Riverbed solutions, all day every day, all around the world.

Are you making the most of your corporate bandwidth?

Can your remote workers and branch offices communicate effectively?

Two thirds of the workforce now operates in locations other than head office. Many workers are knowledge workers, who are dependent on good quality connectivity across corporate-wide area networks (WAN).

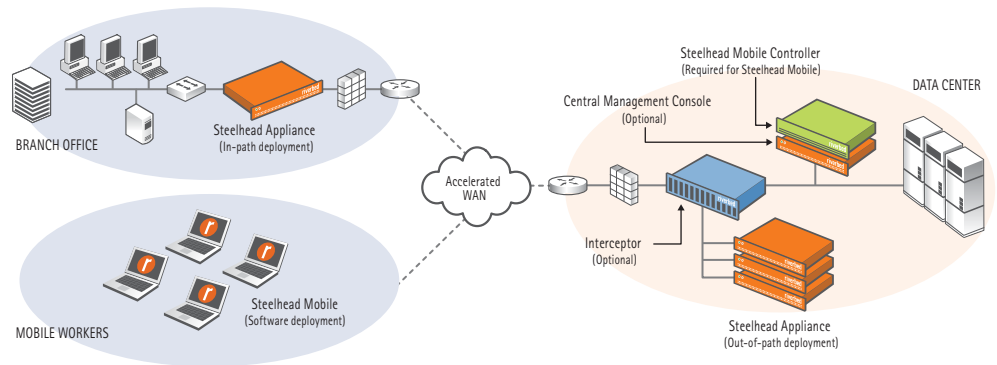

Applicable solutions based on Riverbed ensure your workers make the most of existing connectivity and experience LAN-like performance wherever they are.

Are you making the most of your existing infrastructure and connectivity?

Today's distributed knowledge-based workforce presents a wide array of new challenges. Problems that can limit productivity include:

- Poor application performance in business critical applications.
- Slow remote data replication or backup that damages operational performance and lock machines for hours.
- Limited consolidation options, resulting in numerous expensive to maintain servers in many offices.
- Mobile connectivity that is unable to run business critical applications.

Riverbed Wide-area Data Services (WDS) from Applicable enable you to solve these problems with a single managed appliance at each site, or a simple managed client on remote worker's laptops, without connectivity upgrades.

Why choose Applicable for implementation and management of Riverbed solutions?

Applicable have been providing business critical managed services for almost a decade. There are very few more experienced enterprise service providers in the market today. Key benefits Applicable can offer today are:

- ITIL based fully manned 24x7 service delivery.
- Access to Riverbed qualified engineers from a global accredited Riverbed partner.
- Carefully defined and proven tiered service levels designed to meet business requirements.
- Global deployment and configuration support.
- Automated service reporting, proves ROI.
- End to end understanding of critical business applications.

Call Applicable today on 0800 073 0312 to organise a 30 day trial to see the gains on your infrastructure.
